SUBJECT: UPDATING OF TABLES 1-10 FROM FY 1982 TO FY 1983 FOR THE ARIZONA PLANNING REPORT

In accordance with the request contained in your ED-013 request, dated 10/26/81, I am enclosing the revised tables you requested. The actual time spent by me in preparing the tables (86 hours) was more than twice my estimated time of 40 hours. The new FY 1983 tables use 1980 census data which did not conform with the levels required for the revised tables. I had to expand the 1980 census data to a form that could be utilized in revising the FY 1982 tables.

I would like to draw your attention to a few radical changes that appear in the 1983 tables in comparison with the 1982 tables. We overestimated the Arizona population in the age group 0-4, and also in the 5-9 year age group. This caused a drop in the under 19 years from 982,485 to only 922,240 for April 1982, and 939,165 for April 1983. In contrast to this age group, we underestimated the groups 55-59 and 60-64 resulting in a substantial increase for the group 55 years and older. The 569,900 for 1982 was increased to 615,765, and to 637,760 for April 1983.

Another difficult area is that of ethnic origin. There was a change in definition for the people of Spanish origin. In 1970, if one member of a family was enumerated as Spanish, the entire family was counted as Spanish, even if the other spouse was not of Spanish ancestry. In 1980, each member of the family had to specifically designate Spanish origin to be counted. As a result, the number of Spanish origin fell from 529,465 in April 1982 to 468,165 and 481,045 for April 1983.

Another table that changed drastically was Table 5 on the distribution of population by age, race and sex. In answering the question on race, 227,100 people indicated that they were not white, Negro, Indian, Asian and Pacific Islander. This resulted in a 1980 white population that is much smaller than we had estimated last year. In 1983, white males dropped from 1,299,735 to 1,205,890, while white females dropped from 1,320,790 to 1,228,020. At the same time, non-white males rose from 130,740 in 1982, to 237,595 in 1983, while non-white females rose from 136,235 to 278,095 during the same period.

I hope these explanations will help you answer questions that will arise as readers compare the 1983 API with the previous 1982 report.

Family Assistance Administration
January 1982

Aid to Families with Dependent Children (AFDC) provides financial assistance to children deprived of support or care due to death, divorce, absence, or disability of one or both parents. It also provides for rehabilitation and job placement for children and parents through the Work Incentive Program (WIN) and referral to Vocational Rehabilitation or to Job Services, and for children and/or family services.

THE ECONOMY IN 1981 AND THE 1982 - 1983 FORECAST

National Scene

1981 was not a banner year for the national economy. The United States unemployment rate reached 8.9 percent by the end of the year and nine million Americans were out of work. In January 1981, the national unemployment rate was 7.4 percent and 7.8 million Americans were unemployed. In less than a year, U.S. unemployment increased by 1.2 million or 15.4 percent. Hardest hit industries included manufacturing, construction and government. The automobile sector of manufacturing had its worst year since the early 1960s, the construction industry did little better and spending cuts reduced government employment roles and limited services provided to the public. Unfortunately there is little indication that the upturn in the U.S. economy, when it does come, will significantly reduce unemployment this year. Most forecastors are predicting a rough first half for 1982, with the anticipation that recovery will begin to take shape by the 3rd quarter of the year.

The Arizona Economy

In Arizona, the economy performed much below average during 1981. Though year end unemployment at 6.5 percent was well below the national rate, economic circumstances were worse than the mid six percent unemployment rate would suggest. The economy was stagnant as the state's usually strong growth in jobs fell to a trickle. In an average year, Arizona usually adds about 43,000 jobs, but in 1981 about 25,000 jobs were added. Layoffs were held to a minimum, but few new jobs were being created. Most industries managed to hold their own during this difficult period, but severe employment losses were evident in the construction industry, and by year's end the long depressed copper mining industry was forced to begin layoffs. During most of 1981 the aerospace and electronic sectors of the manufacturing category buoyed a shaky state economy, but by the 4th quarter of 1981, even these industries were beginning to feel the strain of a weak national economy, and there were some scattered layoffs before the year ended.

Arizona Economic Forecast

As we entered 1982 there was little to indicate that the first two quarters of the year would bring anything but bad news. Unemployment is on the rise. Layoffs are beginning to occur with more regularity and interest rates remain high. Though most Arizona industries will likely hold their own during the 1st and 2nd quarters of 1982, copper mining and construction are expected to encounter more instability. Copper prices will likely remain low and limited product demand from the depressed national automobile and construction industries will not help this already troubled industry. The Arizona construction industry is faring little better. Continued high interest rates stifled residential development as high unemployment among industry workers continued. In addition to high interest rates causing havoc in this industry, the slowing in the rate of growth of Arizona's economy is also having its impact. There is less demand for residential building as fewer people move to the state because they are unable to sell the house they own and job opportunities here are limited. Also, as the economy has cooled so has the

demand for commercial building. If it weren't for some large construction projects that have been underway for a long time (the Palo Verde Power Plant and the Central Arizona Project), employment in construction would have declined even further. As these facilities are completed, they will retard expansion in the industry.

It is unlikely that recovery will take place in Arizona until there are positive signals from the national economic scene. Before the Arizona construction industry can recover, interest rates will have to fall significantly and before the Arizona mining industry can recover, nationwide automobile production and construction will have to show some signs of life.

MARICOPA COUNTY

In 1980 the annual average unemployment rate in Maricopa was 5.9 percent. During most of 1981 that rate was less than 5.5 percent as the county's economy valiantly fought off the advances of a nationwide economic slowdown. Spurred by an expanding aerospace and electronics sector, Valley manufacturing fared well during the first three quarters of 1981 and was largely responsible for the Maricopa County economy's relatively good performance during most of 1981. Unfortunately other Valley industries did not do as well. Construction continued to do poorly as industry employment fell from nearly 50,000 in December 1980 to less than 45,000 by December 1981. With interest rates expected to remain high in 1982, the outlook for this industry is not good. Government was another sector of the county's economy that performed poorly in 1981. Between December 1980 and December 1981, government employment fell 2,200 to just over 103,000 as budget cuts rippled through government agencies in the Phoenix metropolitan area. Look for further cuts during the first two quarters of 1982 and possibly longer depending on the Administration's success or failure in dealing with Congress.

Other Maricopa County industries held their own during 1981 and should continue to do so during 1982 unless national conditions worsen considerably. The diversified nature of the metropolitan economy should prevent a disastrous 1982 performance but it is likely that the mid-year unemployment rate will hover in the 7 percent range before improving slightly later in the year.

Look for manufacturing to be among the first industries to recover as Valley electronic and aerospace firms begin to expand later in 1982 or early in 1983. The big question mark however is the construction industry. With interest rates expected to remain high at least through mid-1982, recovery in this vital Maricopa County industry could be postponed until 1983 and perhaps well into 1983. Until construction begins to grow again, it is not likely that the Maricopa economy will be able to do much better than to just hold its own.

PIMA COUNTY

The unemployment rate in Pima County displayed little change between 1980 and 1981, holding steady in the mid-five percent range. Between December 1980 and 1981, construction and government lost almost 5,000 workers but these losses were largely offset by employment gains in electronics, aerospace, services and trade.

Construction and government may face more difficult times during 1982 and a prolonged economic slowdown could limit growth in the trade and services category. However, the electronic and aerospace sectors of manufacturing are expected to keep growing in 1982 and should help offset most losses in other categories. The unemployment rate should hover around the 7 percent range during most of 1982, perhaps dropping to the mid 6 percent range by the end of the year.

Job opportunities will be limited during most of 1982, and early in the year, largely confined to service and trade related semi-skilled and unskilled positions. Technical and professional jobs will be available throughout 1982 and 1983 in the electronic and aerospace sectors of the economy. When economic conditions improve and interest rates fall, expect a significant increase in construction activity. Pima County grew rapidly during the 1970s and should continue to do so during the 1980s. The current economic situation is somewhat stagnant, but this slow growth period will pass.

APACHE COUNTY

In 1981 the unemployment rate in Apache County was the highest in the state, reaching an astounding 28.7 percent during October. Key county industries suffered significant employment losses. Hardest hit were the services and construction sectors of the county's economy. Construction employment suffered from the completion of the St. John's powerplant project, but also felt the pains of high interest rates. Service employment fell between 1980 and 1981, with some of the decline being related to slumping tourism caused by the overall troubles facing the national economy. However, the bulk of the service industry job losses were caused by the elimination of hundreds of CETA workers. These workers were fired as part of the attempt to curtail government spending by reducing government employment and training programs. Unfortunately the elimination of this program contributed to a rapid rise in the county's unemployment rate which jumped from 17.4 percent in December 1980 to 25.0 percent in December 1981. The other major industry in Apache County that has been hurt is lumbering. With construction activity way down, demand for lumber products has declined significantly.

The outlook for 1982 is not rosy. In recent years Apache County unemployment rates have been three to four times the unemployment rate for the state. With Arizona unemployment expected to worsen during the first two quarters of 1982 it is likely that Apache County will see unemployment rates approaching the 30 percent range. Few job opportunities will be available in this part of Arizona and most of those jobs that will exist will be for unskilled and

semi-skilled workers such as secretaries, laborers, clerks, and janitors. The majority of any improvement the county sees will be related to tourism activity and to the return of jobs that have been lost in the current recession. Given the county's demographic makeup, the local economic situation will be characterized as one where there is an abundance of labor but a shortage of jobs.

COCHISE COUNTY

Though unemployment in Cochise County was slightly higher than the statewide average during 1981, it did not exhibit the significant rises evident in some parts of the state. Key industries such as trade, services and manufacturing displayed remarkable employment stability during a difficult economic period and government, the county's major employer was not forced to significantly reduce its employment levels despite the current popularity of budget cutting.

Budget limitations in government spending may not hurt Cochise County in 1982. With nearly 45 percent of all wage and salary employment, government is by far the county's largest employer, and any significant reduction in government employment would have a negative impact on the county's economy. However, much of that employment is military-related and should not be affected by upcoming spending cuts. If sizeable layoffs were to occur in the Cochise County government sector, it is likely that the first industry to feel the pinch would be trade. With 20 percent of county employment, the trade category is the second largest employer in the county.

Job opportunities in 1982 are expected to be limited to unskilled and semi-skilled positions, and even among these types of job categories there will be few openings.

COCONINO COUNTY

In sharp contrast to national trends, Coconino County's 1981 unemployment rate declined slightly from its 1980 annual average of 8.6 percent. By December 1981, the county's unemployment rate had fallen to 8.2 percent. Construction employment levels fell as continued high interest rates curtailed building activities, but most other sectors of the economy had fairly steady employment levels during 1981.

Government, services and trade are the major employers in Coconino County and these industries managed to hold their own in 1981 inspite of the difficult economic times. Trade managed to show employment gains as decreasing gas prices caused an increase in summer tourism in this northern Arizona county. While some areas of the state seemed to lose tourism activity, business in the county remained strong. If in-state and out-of-state tourism remains strong, the county should be able to weather the current economic downturn without significant harm.

In Coconino County, government is the largest industry and Northern Arizona University is that industry's key employer. While other government agencies are being clobbered by budget cuts, the educational institutions are likely to hold their own during the first half of 1982. Coconino County may suffer some additional unemployment during the first half of 1982 but in general should do better than most of the balance of state. Like other areas in Arizona, new job opportunities in Coconino County will be few and far between during the first of 1982. Aside from semi skilled and unskilled jobs there will not be many new employment opportunities in Coconino County during the first two quarters of the year. Most jobs will continue to be tourism-related.

GILA COUNTY

Though the unemployment situation in Gila County did not worsen significantly during 1981, the economic picture did darken as the county's key industry, copper mining, experienced a difficult year. Copper prices sank to unprofitable levels; demand for the orange metal fell significantly; and by year's end, the ominous threat of "layoffs" reared its ugly head. Other major Gila County industries such as government, trade and services held their own in 1981, but trouble in the copper industry could have a negative impact on these other sectors of the county economy during 1982. Mining and smelting employment is expected to decrease and depending on the magnitude of the job losses, may lead to employment losses in other county industries. 1982 job opportunities are likely to be limited to semiskilled and unskilled jobs and even in these opportunities will be few in number. Some job opportunities can also be expected in tourism-related segments of the economy, but weakness in the state and national economies will limit even this area. We expect 1982 to be a time of rising unemployment and a limited number of job opportunities.

GRAHAM COUNTY

In 1980 the annual average unemployment rate in Graham County was 9.6 percent. This was higher than the statewide unemployment rate but in line with the rates in Arizona's other rural counties. 1981 produced much the same result with unemployment reaching 12.4 percent by the end of the year. Government and trade, Graham County's major employers held fairly steady employment levels despite the nationwide economic downturn, and most other county industries did likewise. Only construction and manufacturing suffered significant employment losses during 1981. The employment loss in manufacturing was related to the closure of a companies manufacturing facility. Although the business closed due to poor economic conditions, it does not seem likely to reopen when the economy recovers. The employment loss in construction was related to high interest rates and the associated declined in residential and commercial building activity.

Graham County's economy is largely agriculturally oriented and accordingly is somewhat insulated from the effects of the current recession. Sorghum,

cotton, barley and alpalfa are important crops grown on the banks of the Gila River near the county's primary population center of Safford-Thatcher. Government, the county's leading employer is however not insulated from the economic turmoil sweeping across the county. Many of those employed in Graham government occupations are in either education or corrections work, and could face budget cuts in 1982 and 1983. If budget cuts do materialize in government categories, the county's unemployment rate could worsen rapidly.

At the present time it appears county employment levels will remain stable with little or no growth projected for 1982. Scattered job opportunities will be available for semi-skilled and unskilled workers but even these types of postions will be in short supply.

GREENLEE COUNTY

Greenlee County is a copper county and the success or failure of the copper industry makes or breaks the economy of this area. In 1980 a lengthy copper strike idled much of the Greenlee County labor force and negatively impacted those engaged in retail trade and services. Copper industry employment rebounded during 1981, but falling prices for the orange metal and reduced product demand by primary buyers such as the automobile and construction industries preceeded the short term layoffs that occurred at year's end. Unfortunately, the 1982 outlook for the copper industry and hence, for Greenlee County, is not good. Industry recovery is not in sight at this time and any sizeable layoffs at copper facilities in Greenlee County would likely spread to other sectors of this county's mining dominated economy. In the county, with about 70 percent of the jobs involved in mining or smelting copper, when the industry is hit with hard times, the whole local economy suffers.

In 1982, new job opportunities in this part of Arizona will be virtually nonexistent. Those Greenlee residents who are currently employed would be wise to stay at their current jobs and anyone seeking to relocate to this area should not do so unless employment has already been secured in advance of a move.

MOHAVE COUNTY

Between 1980 and 1981 the unemployment situation worsened in Mohave County as manufacturing, construction and mining suffered significant employment losses related to the overall poor economic conditions in the nation. The manufacturing declines were felt hardest in the Lake Havasu area where two-thirds of the industry's employment is located. High interest rates continued to hurt Mohave construction; and mining, a key Kingman employer, was hit with a sizeable layoff at year's end as falling copper prices continued to plague this beleaguered industry.

The outlook for most of 1982 is not good. Key industries such as manufacturing, construction and mining may be in for a difficult period. These sectors are responsible for about 25 percent of the county's wage and salary employment and coupled with tourism, are the sources of income for other county businesses. Other county industries should hold their own through mid-1982 and some new job opportunities could open up later in the year. Those new positions are likely to be in the trade and service categories where tourism related employment is expected to be an important source of job growth. Unskilled and semi-skilled jobs in hotels, motels, restaurants and drinking establishments may become available in these sectors.

NAVAJO COUNTY

Double digit unemployment rates have become a way of life in Navajo County and 1981 figures indicate this trend has not been reversed. Like Apache County, much of the employment in Navajo County is related to government and shows up in the government and services industries. These two categories are responsible for 50 percent of Navajo County employment and during 1981 suffered significant employment losses. Much of this employment loss was related to the budget cutting that swept through Washington last year and the near term outlook is that these jobs will not return. In this northern Arizona county where employment opportunities have always been limited, they are now virtually non-existent.

In addition to job losses in government and services, significant reductions in employment have occurred among lumbering businesses. With the expectation that the construction industry will not significantly recover in 1982, it will be a long time before this important industry returns to its earlier levels.

While national economic events have had significant negative impacts on the Navajo County economy, there is reason for hope. Tourism activity has not declined as much as in previous recessions and this is important for local businesses. While this segment is highly seasonal, it is an important source of jobs. We expect to see job openings in this area with most of the opportunities confined to the unskilled and semi-skilled categories.

PINAL COUNTY

Copper mining is big business in Pinal County and the problems faced by that industry could mean tough times for this part of Arizona during 1982. Continued low copper prices and reduced product demand have forced county copper operators to begin laying off production workers. Unless this industry shows some improvement, it is likely that the situation will worsen in 1982. Improvements in 1983 will be strongly influenced by the economic health of the national automobile and construction industries.

During most of 1981, Pinal County's unemployment rate was close to the Arizona rate. It could rise in 1982 if the copper industry continues to be troubled.

During the summer of 1981 both the county and state unemployment rates were in the same range. But by the end of 1981, while the statewide unemployment rate was almost unchanged, the Pinal County unemployment rate was nearly 8.0 percent. With copper mining employment expected to continue its decline in 1982, the county can expect to face greater economic problems in the future.

Those job opportunities that will be available in Pinal County in 1982 are likely to include laborers, unskilled workers and semi-skilled workers. Unfortunately few openings are expected until the later part of the year or the beginning of 1983. Don't expect these jobs to become available until there are some signs of economic vitality in the national automobile and construction industries. With the county's economy importantly tied to the copper industry, these declines will be mirrored in local business activity.

Agricultural communities such as Eloy and areas with diversified economies such as Casa Grande may not be hurt as badly as could be the case in the copper communities of San Manuel-Oracle and Hayden-Kearny-Winkleman.

SANTA CRUZ

While many parts of Arizona were hit with rapidly increasing unemployment during 1981, Santa Cruz County managed to hold its own. In 1980, the average annual unemployment rate was 12.4 percent. In 1981, the unemployment rate showed little overall change; employment increased slightly and unemployment decreased marginally. In most parts of the state, the major employment losses were in the construction and mining industries. Fortunately for Santa Cruz County, neither of these industries are major employers.

Key Santa Cruz industries such as trade and services held their own during 1981 as the Nogales tourist business helped the county weather a difficult economic year. The local dependence on tourism worked to its advantage in 1981 and will be a likely source of stability in 1982 and 1983. With an increasing amount of business coming from Mexico, businesses that are directly involved with tourism can expect to benefit.

Though new employment opportunities will be limited during 1982, it is likely that some trade and service employers will add to their employment roles during the later part of 1982 and into the first quarter of 1983.

YAVAPAI COUNTY

Between 1980 and 1981, there was little change in the unemployment situation in Yavapai County. Job losses in manufacturing and construction were offset by slight gains in trade and services. Government, a beleaguered industry in many counties displayed remarkable resiliance in Yavapai County and even managed to slightly increase employment.

Tourism in the Sedona and Prescott areas held its own in 1981 despite the poor national economic situation and should weather 1982 without too much difficulty. Other industries may find the going a bit rougher during 1982. Construction is expected to remain slow because of the continuation of high interest rates; government a leading county employer could face job losses as the budget cutters in Washington try to slash more dollars from the public sector; and mining, a troubled industry throughout Arizona, could suffer job losses in 1982 unless copper prices improve from their current unprofitable levels.

During most of 1981 the unemployment rate in Yavapai County was lower than the state rate. Unless national economic conditions improve, unemployment could rise during 1982. Employment opportunities will be largely confined to tourist related unskilled and semi-skilled positions in restaurants, drinking establishments and hotels and motels. These job openings will not be widespread in 1982 but by 1983 should be numerous, as the county rebounds from the recessionary woes of this year.

YUMA COUNTY

Though well above the statewide average, Yuma County unemployment held fairly steady between 1980 and 1981. Agriculture, a sector of the economy somewhat isolated from the impacts of the recession continued to be a major factor in the Yuma economy during 1981 and should continue to rival Maricopa County as the leading agricultural area in Arizona in 1982.

Trade, services and government were major employers last year and all of these sectors survived a difficult 1981. The immediate future however is somewhat clouded as the budget cutter's axe threatens Yuma government workers, and unstable economic conditions threaten tourist related service and trade employment in Yuma and the area north along the Colorado river.

Most 1982 job opportunties will be tied to trade and service employment in unskilled and semi-skilled positions and even these jobs will be hard to find until the end of 1982 or the beginning of 1983.
